Science
Spend some time outside and count the number of wild animals you see. Do you know what type of wild animals you saw?

Type of Wild Animals:
1. __________________________   2. __________________________
3. __________________________   4. __________________________
5. __________________________   6. __________________________

How long did you spend outside? ________________________

Total Number of Wild Animals: __________________________
In a town, an apartment complex is replaced by a park. The apartment complex was home to 8 squirrels, 11 crows, and 7 raccoons. The park has space for 12 squirrels, 15 crows, 12 raccoons, and 9 moles. How many new wild animals have homes?

How many wild animals could live at the apartment complex?

\[8 + 11 + 7 = \text{____} \]

How many wild animals can live at the park?

\[12 + 15 + 12 + 9 = \text{____} \]

How many more wild animals have homes?

\[\text{____} - \text{____} = \text{____} \]
A common wild neighbor of PAWS is the Steller’s Jay!

Draw your own wild neighbor! What kind of animal is it?
