Math

Every year, outdoor pet cats harm our wild neighbors. This includes birds and small mammals.

One outdoor pet cat can harm 11 birds every year. How many birds could be harmed if there are six outdoor pet cats?

$$\underline{\quad} \times \underline{\quad} = \underline{\quad}$$

One outdoor pet cat can harm 15 small mammals every year. How many small mammals could be harmed if there are six outdoor pet cats?

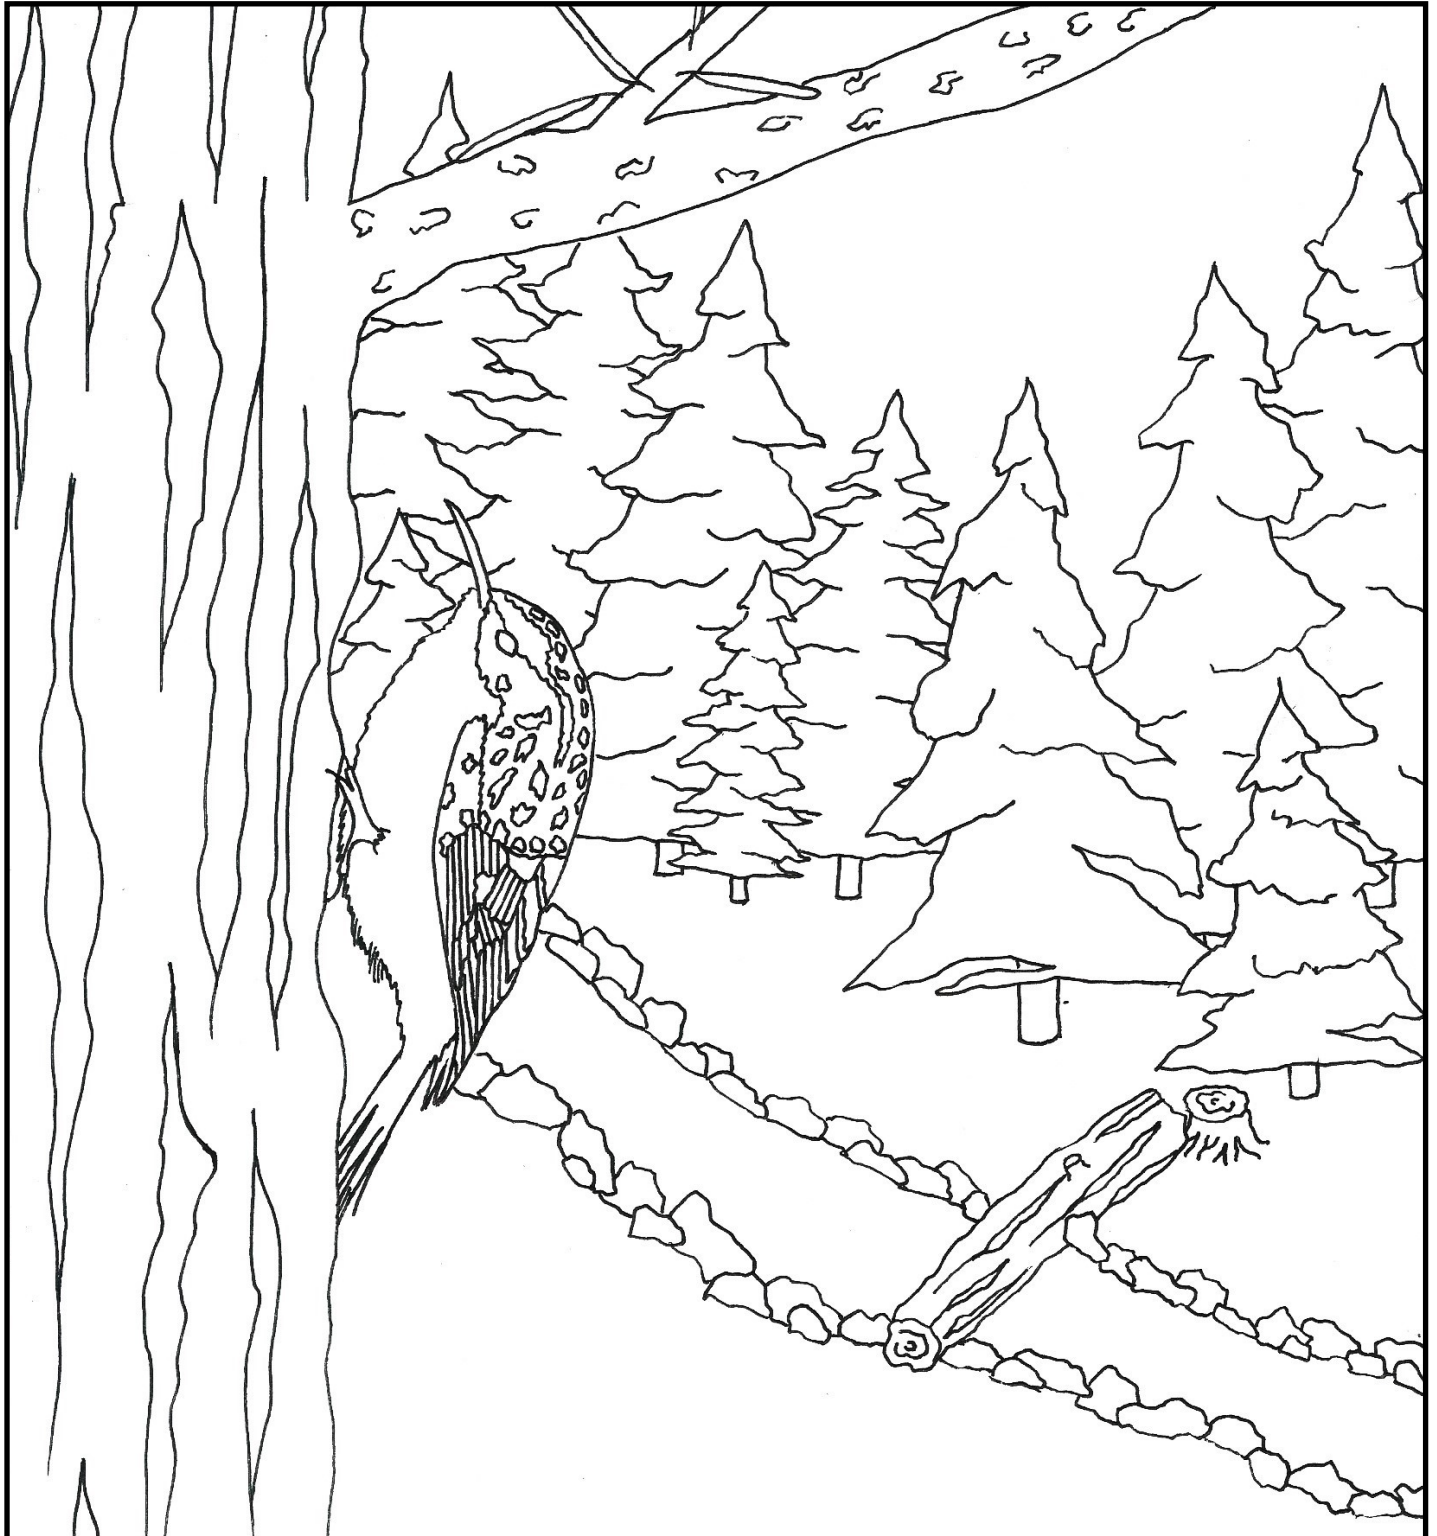

$$\underline{\quad} \times \underline{\quad} = \underline{\quad}$$

How many animals in total could be saved if those six outdoor pet cats became indoor cats?

$$\underline{\quad} + \underline{\quad} = \underline{\quad}$$
